PROFESSIONAL SUMMARY

Computer Science Engineering graduate with hands-on experience in Python, SQL, data processing, machine learning, and web-based data applications. Experienced in building Python applications, working with relational databases, processing structured and unstructured data, and developing ML-based solutions. Built projects involving resume data extraction, adaptive learning recommendations, and image-based disease prediction. Strong foundation in Python, SQL, NumPy, Scikit-learn, databases, OOP, and problem solving, with an interest in data and performance analytics.

TECHNICAL SKILLS

Programming	Python, JavaScript, SQL
Data Science & ML	NumPy, Scikit-learn, Machine Learning, Data Preprocessing, Regression, Classification, Model Evaluation
Databases	PostgreSQL, MySQL, Supabase, SQL Queries, Joins, Subqueries, Database Design
Backend	Flask, REST APIs
Frontend	HTML, CSS, JavaScript, React.js
Tools	Git, GitHub, VS Code
Core	OOP, Data Structures & Algorithms, DBMS

EXPERIENCE

Python Full Stack Development with Data Science Intern — Techclaude | June 2026 – Present

- Worked with Python-based application development, SQL, data processing, and data-oriented problem solving.
- Developed and integrated frontend, backend, database, and API components for data-driven web applications.
- Applied Python programming and machine learning/data analysis concepts during project development and technical learning.
- Worked with databases and application data to support backend features and structured data workflows.

PROJECTS

Adaptive Learning & Quiz Recommendation System

- Developed an adaptive learning system that uses quiz performance to determine question difficulty and personalized progression.
- Implemented topic-wise performance tracking and score-based decision logic for recommending easy, medium, and hard questions.
- Stored user performance and quiz data in Supabase and created interactive performance visualizations using Recharts.
- Converted historical performance data into personalized learning recommendations.

Resume Parser & Analysis System — Python, Flask, React, Supabase

- Built a Python-based application to extract structured information such as skills, education, experience, projects, email, and phone from PDF and DOCX resumes.
- Processed unstructured resume text using Python libraries and regular expressions and converted it into structured records.
- Stored parsed resume information in Supabase and connected a React frontend with a Flask REST API.
- Implemented TF-IDF and cosine similarity to calculate similarity between resume skills and job requirements.
- Added file validation and PDF/DOCX processing workflows.

Disease Prediction Using Eye Retinal Images — Python, TensorFlow, OpenCV, MySQL

- Developed an ML application for predicting eye-related diseases from retinal images using a CNN-based approach.
- Applied OpenCV image preprocessing techniques and TensorFlow for CNN model development.
- Used Python for data processing and application logic and MySQL for application-related data storage.
- Integrated the ML model with a web-based application for image-based prediction.

EDUCATION

B.E. — Computer Science & Engineering | VSM's SRKIT, Nipani — VTU | 2026 | CGPA: 8.1/10

RELEVANT COURSEWORK

Data Structures & Algorithms, Database Management Systems, Object-Oriented Programming, Machine Learning, Data Science, Statistics, Computer Networks

ADDITIONAL

Interested in Python-based data applications, machine learning, SQL analytics, performance analysis, and data-driven problem solving.
